

Productivity App

WELCOME

PROBLEM

Most productivity tools help users list and organize their tasks - but they stop there. They don't teach users **how to work better** ,or help them understand their strengths, weaknesses , or behavior patterns.

SOLUTION

An AI-powered productivity **app for** individuals **who** feel stuck in unproductive cycles and **want** more than just task lists to understand their behavior, break old patterns, and build consistent habits that lead to real growth.

Development Approach: Agile Incremental Model

(How we built and iterated the Smart Task Manager)

We adopted the Agile Incremental Model to allow continuous testing, feedback, and improvement throughout the development cycle. Each increment added a working feature, starting with the task dashboard and expanding to AI-based suggestions and reporting.

Requirements

functional

The system shall collect data from task activity, process it through an AI model, and display improvement tips in the interface.

user

The user wants to receive personalized suggestions that help them improve their productivity based on how they complete tasks.

non-functional

The AI suggestions must be generated and displayed within 2 seconds of task completion, with at least 85% accuracy based on prior training data.

System

The system must track user behavior, analyze task completion patterns, and generate suggestions based on AI algorithms.

Architecture pattern

Web-based application

Gantt chart

Versions :

- Version 1:
 - Task creation, editing, deletion
 - Task categorization (personal, work, shared)
 - Daily view interface (basic UI)
- Version 2:
 - AI tracking of task completion patterns
 - Logging behavior data (time spent, completion rate)
 - Basic performance dashboard
- Version 3:
 - Personalized suggestions based on behavior
 - Weekly reports with insights
 - Tip notifications and consistency reminders

Features

AI-Powered Behavior Analysis

- Tracks user patterns across tasks and offers targeted improvement tips (writing, planning, focus...).

Personalized Growth Suggestions

- Simple, targeted tips tailored to your behavior, helping you grow in personal, work, hobby, and collaborative tasks.

Insightful Progress Reports

- Visual weekly summaries that show how you spend time across categories and what's improving.

● Performance Monitoring

Tracks task behavior in real-time and offers micro-feedback to improve your outcomes.

● Multi-Use Flexibility

Works across personal, work, hobby, and shared tasks — with a dynamic interface that adapts to each type.

● Customizable Smart Reports

Generate daily or weekly insights that highlight your top wins, trends, and areas for improvement.

This project represents not just a solution — but a learning journey that sharpened my product thinking and problem-solving mindset. It brought together my experience from the Apple Academy course, my previous work, and my academic background — all combined to shape a product that reflects thoughtful design and real impact.
